

# DERMAPEN

---

## PRE-TREATMENT

- Stop any topical vitamin A products or applications at least 48 hours before treatment.
- On advice from your doctor, stop any blood thinning medications 48 hours before treatment.
- Avoid prolonged sun-exposure for 48 hours prior to treatment.
- Notify your therapist if you are prone to fever blisters in order to arrange a script for prophylactic anti-viral medication. This should be started on the day of the procedure. Please note that treatment cannot be done if there is an active fever blister on or near the area to be treated.
- Treatment cannot be done if you had a peel, Botox or filler 2 weeks prior to treatment.

## POST-TREATMENT

- Do not apply any sunscreen for the first 6 hours following treatment.
- No make-up should be applied for 12 hours following treatment.
- Do not use any products containing vitamin A, exfoliation ingredients or alcohol for at least 4 days following treatment.
- No swimming (salt or chlorine) for 24 hours following treatment.
- Avoid direct sun exposure for at least 48 hours after treatment.
- Do not perform any vigorous exercise for at least 12 hours after treatment.
- Apply barrier cream or Epimax to the facial area until home care products can be re-introduced (as recommended by your therapist).
- Your skin may feel hot, dry and tight for 2 to 4 days following treatment. You may experience redness, swelling, possible bruising and flakiness for 3 to 7 days following treatment.
